## 1. Summary

JanSahay is a comprehensive multilingual platform that bridges the critical gap between Indian government welfare schemes and eligible citizens who remain unaware due to language barriers, complex documentation, and lack of accessible information channels. The platform features OTP-based authentication, AI voice assistant supporting 9 Indian languages, intelligent chatbot with Aadhaar/PAN document analysis, scheme catalog with ratings, comparison tool, eligibility checker, application status tracker, deadline calendar with reminders, and CSC center locator. Built with React.js, Node.js, and MongoDB Atlas, JanSahay ensures that language, literacy, or location never prevents any citizen from accessing government benefits.

## 2. Abstract

JanSahay ( "People's Help") is a voice-first, multilingual digital platform designed to eliminate the barriers that prevent India's most vulnerable citizens from accessing government welfare benefits. By combining AI-powered voice assistance in 9 regional languages, document-based personalisation, and end-to-end application tracking, JanSahay transforms complex bureaucratic processes into a simple, guided experience — accessible on any modern browser without installation.

## 3. Problem Statement

- **Scale:** Over 1,000 central and state welfare schemes exist — health, housing, agriculture, women welfare.
- **Language gap:** 65% of rural India cannot read English, the default language of scheme documentation.
- **Awareness gap:** 80% of eligible citizens never apply because schemes are buried in complex, inaccessible PDFs.
- **Digital divide:** Absence of regional-language digital interfaces excludes the most vulnerable populations.
- **Lost entitlements:** Billions of rupees in benefits go unclaimed annually due to simple lack of awareness.

## 4. Proposed Solution

JanSahay is a React.js-based web application offering a fully guided, voice-first experience for discovering and applying to government schemes. Citizens log in with a mobile OTP, speak to an AI assistant in their native language, upload identity documents for personalised recommendations, check eligibility with a match percentage, and track applications through five clear stages — all in a single platform.

## 5. Key Features

| | | |
|---|---|---|
| 01 | **OTP-Based Mobile Authentication** | Secure, passwordless login using a 6-digit OTP with JWT session management. |
| 02 | **AI Voice Assistant — 9 Indian Languages** | Real-time speech recognition and synthesis in Hindi, Telugu, Kannada, Tamil, Bengali, Marathi, Gujarati, Malayalam, and Punjabi. |
| 03 | **AI Chatbot with Document Analysis** | Upload Aadhaar or PAN card; AI extracts profile data and recommends matching schemes automatically. |
| 04 | **Scheme Catalog with User Ratings** | Browseable catalog covering PM-KISAN, Ayushman Bharat, PM Awas Yojana, Sukanya Samriddhi, Mudra Yojana, and more. |
| 05 | **Scheme Comparison Tool** | Side-by-side comparison of any two schemes across benefits, eligibility criteria, and required documents. |
| 06 | **Advanced Eligibility Checker** | Form-based engine calculating a match percentage using age, income, occupation, and gender inputs. |
| 07 | **Application Status Tracker** | Five-stage pipeline: Applied → Documents Sent → Under Review → Approved → Amount Received. |
| 08 | **Deadline Calendar & Reminders** | Push notification-enabled calendar so no application window is ever missed. |
| 09 | **CSC Centre Locator** | GPS-integrated map to find the nearest Common Service Centre for assisted applications. |
| 10 | **WhatsApp Sharing** | Share scheme details via WhatsApp. |

## 6. Technical Architecture

| Layer | Technology | Purpose |
|---|---|---|
| Frontend | React.js | Component-based UI with state management |
| Voice Engine | Web Speech API,ollama | Browser-native speech recognition & synthesis |
| Backend | Node.js + Express | RESTful API server |
| Database | MongoDB Atlas | Cloud-hosted NoSQL for schemes and user data |
| Authentication | JWT + OTP | Stateless token auth with mobile OTP |
| AI Features | Document Analysis | Aadhaar/PAN parsing for personalised recommendations |
| Notifications | Push API | Deadline reminders and status updates |
| Location | GPS + Maps | CSC Centre locator with geolocation |

## 7. User Journey — How It Works

**Step 1 — Secure Login**
User enters their mobile number and verifies with a 6-digit OTP. A JWT token is issued to manage the session.

**Step 2 — Personalised Dashboard**
Real-time statistics are shown: total schemes available, schemes the user qualifies for, and active applications.

**Step 3 — Scheme Discovery**
Browse schemes by category with full details — benefits, required documents, eligibility criteria, and helpline numbers.

**Step 4 — Voice Interaction**
Activate the voice assistant and speak in any of 9 regional languages. AI responds in the same language with scheme guidance.

**Step 5 — Document-Based Recommendations**
Upload Aadhaar or PAN card; the AI chatbot analyses the document and recommends relevant schemes automatically.

**Step 6 — Eligibility Check**
Complete a short form (age, income, occupation, gender) and receive a ranked list of matching schemes with percentage scores.

**Step 7 — Apply & Track**
Submit applications with one click. Track each application through 5 stages from submission to benefit receipt.

**Step 8 — Reminders**
Set deadline reminders for schemes of interest and receive push notifications so no window is missed.

**Step 9 — Find Nearest CSC**
GPS locates the nearest Common Service Centre for citizens who prefer in-person assistance.

## 8. Results & Achievements

- ✓ All 10 core features fully functional with live MongoDB Atlas connection.
- ✓ 9 Indian regional languages supported with real-time speech recognition and synthesis.
- ✓ Scheme catalog covers PM-KISAN, Ayushman Bharat, PM Awas, Sukanya Samriddhi, Mudra Yojana, andmore.
- ✓ Eligibility engine delivers instant match percentage scores, eliminating manual research.
- ✓ Complete end-to-end workflow — scheme discovery to application tracking — in a single platform.
- ✓ Fully responsive; works on any modern browser without installation.
- ✓ OTP-based authentication removes password friction for low-literacy users.

## 9. Future Scope

- **WhatsApp Bot:** Enable scheme queries and status checks directly through WhatsApp.
- **Offline Mode:** PWA with service workers for rural areas with intermittent connectivity.
- **Video Tutorials:** Step-by-step how-to videos in regional languages.
- **Mobile App:** Native Android and iOS apps on Play Store and App Store.
- **AI Scheme Matcher v2:** ML model to proactively push newly launched relevant schemes to users.
- **Gram Panchayat Integration:** Direct API links with local government systems for real-time status.

## 10. Conclusion

JanSahay reimagines the interface between government and citizen. By centering voice, regional language, and AI-driven personalisation, it removes the three most critical barriers to scheme access: language, literacy, and awareness. In a nation where entitlements often go unclaimed not due to ineligibility but simple ignorance, JanSahay is not just a technology solution — it is a digital rights platform. The project demonstrates that citizen-first engineering can close the gap between policy intent and ground-level impact, embodying the true spirit of Digital India.

**JanSahay** — Because every citizen deserves to know what is rightfully theirs.
